About Me

Software Engineer with experience leading project tasks, coordinating with cross-functional teams, managing schedules, and handling multiple projects simultaneously. Skilled in technical development, issue investigation, team support, and administrative project tasks such as task assignment, progress monitoring, documentation, and onshore coordination.

Skills

- Java Spring Boot
- C#
- React JS/TS
- VB6.0
- VB.Net
- PostgreSQL
- SQL Server
- MySQL
- Unit Testing
- Integration Testing
- System Testing

Work Experience

Accenture
Custom Software Engineering Sr Analyst
Nov 2024 – Present

- Developed dynamic web applications leveraging Java EE and JSP for server-side logic and JavaScript for interactive front-end components.
- Architected system design documents that mapped complex business flow logic into technical requirements, ensuring alignment between stakeholders and developers.
- Managed integrated database environments directly within Eclipse, performing schema management, SQL querying, and data validation to support application functionality.
- Executed end-to-end testing protocols, including unit, integration, and system testing, to identify bottlenecks and ensure high-quality software delivery.
- Spearheaded technical investigations, performing deep-dive root cause analysis to resolve complex bugs and optimize code performance.
- Mentored and supported team members by leading task analysis sessions and providing guidance on difficult technical investigations.
- Facilitated onshore-offshore coordination, managing task assignments and project updates to ensure seamless delivery across different time zones.

Tsukiden Global Solution, Inc
Software Engineer II
May 2021 – Nov 2024

Hospital System and Portal Project: (June 2023 – Nov 2024)

- Co-engineered system architecture and features in a high-compliance hospital portal environment, collaborating closely with senior Japanese engineers to meet strict functional requirements.
- Developed responsive User Interfaces using React and implemented robust back-end services with Java Spring Boot.
- Optimized data persistence and retrieval using PostgreSQL, ensuring efficient handling of sensitive patient and portal data.
- Deployed and maintained applications on RHEL (Red Hat Enterprise Linux), managing environment configurations and ensuring system stability.
- Owned the full development lifecycle for assigned modules, including UI design, feature coding, unit testing, and root-cause analysis for bug fixes.

Migration Project: (May 2021 – June 2023)

- Executed the architectural migration of legacy VB6 systems to C# .NET, modernizing the codebase to improve maintainability and performance.
- Implemented the MVP (Model-View-Presenter) design pattern to decouple business logic from the user interface, enhancing code testability.
- Contributed to the SDLC planning phase, including the creation of basic and detailed design documents (BDD/DDD) for software modernization.
- Developed comprehensive unit test specifications and conducted rigorous functional testing to ensure 100% logic parity between the legacy and migrated systems.

Digital Doors Software Solutions, Inc.
Software Developer
Oct 2020 – Dec 2020

- Feature Engineering: Rapidly developed and enhanced POS, Inventory, and Customer Management modules using C# and ASP.NET MVC.
- API Integration: Built and optimized API Controllers to connect front-end interfaces with SQL Server databases, improving real-time data processing.

Education

Colegio de Montalban
Bachelor of Science in Information Technology
2015 – 2019

- Thesis Lead and Programmer for a "Smart Cane" IoT project for the visually impaired, overseeing the full development lifecycle from hardware-software integration and coding to technical documentation and successful panel defense.
